

Add Media Module – Embed Video Clip

Introduction

Media modules allow you add images, videos, sound and animations to your portfolio pages. In this example, we will add the Image/Video/Audio module and **embed a YouTube video** directly into a sample portfolio. We will begin by adding a module to an existing page we have already created.

Embed a Video Clip

Step 1: To begin, click **Add A Module**

Step 2: Click the **Image/Video/Audio** tab to add the "media" module to your e-Portfolio

Step 3: Click **Add This Module** to confirm.

The success screen will appear.

Step 4: Click **I'm Done** to view your new module.

Step 5: Click the **Edit** tab to add media.

Step 6: Click **Replace This Media**

The *Browse for Media* window will appear. In this example, we will browse for media (a video) found on the Web. Keep in mind that you can browse for media that resides on your own computer as well.

Step 7: Click **Media From Web** to link to online media.

Step 8: Copy and paste the "embed" code in the field provided. In this example we will embed the code for a video clip that resides on the popular *YouTube* website.

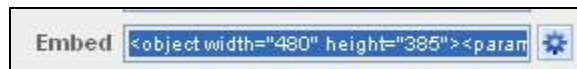

In order to copy the Embed code, access the specific *YouTube* page with the video you want to use. We suggest that you **open a second browser window** (or tab) to access the secondary web site. Please remain logged in to your Digication account in the first browser window/tab.

Step 9: Click **Embed** to select the embedded text.

Step 10: Using the keyboard, select **Control + C** (Windows), or **Command + C** (Mac), to **copy** the text

Return to your Portfolio page in the first browser window or tab and **paste** the link you just copied from the *YouTube* site into the **Embed** field provided.

Digication will *automatically* recognize the link as a video being streamed from YouTube.

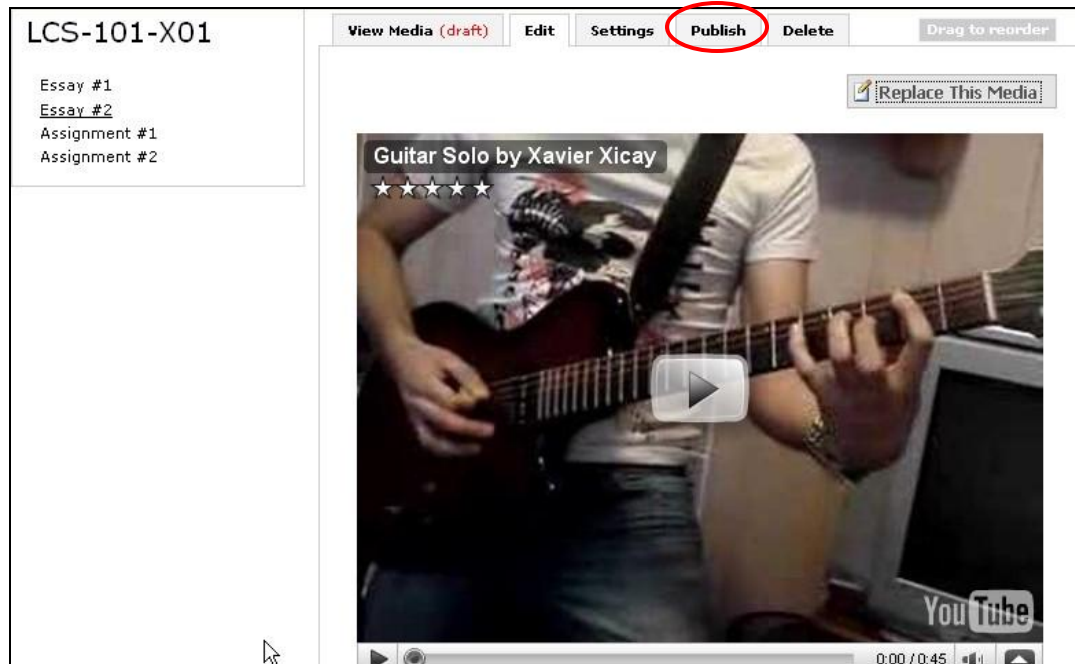

Step 11: Click **Done** when finished.

Your video will appear in your Portfolio

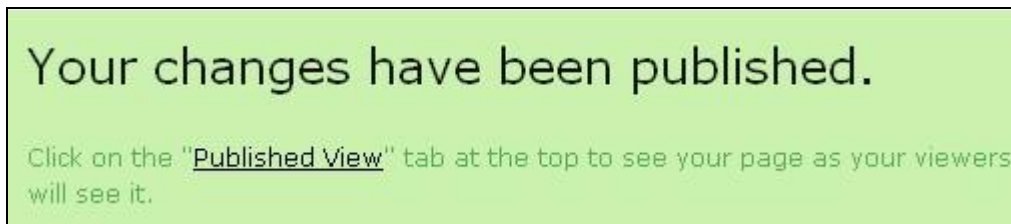

Step 12: Click **Publish** to publish your video for others to view.

Step 13: Click **Publish Changes** to finish

A screen will appear indicating that your changes have been **published**.

Conclusion

We hope this guide was helpful.
